### **Week 6**

**Name:** Suhan B Revankar

**SRN:** PES2UG19CS412

**Week number:** 6

**Date:** 6/3/2021

**Name of the experiment:** Developing a network using cisco packet tracer.

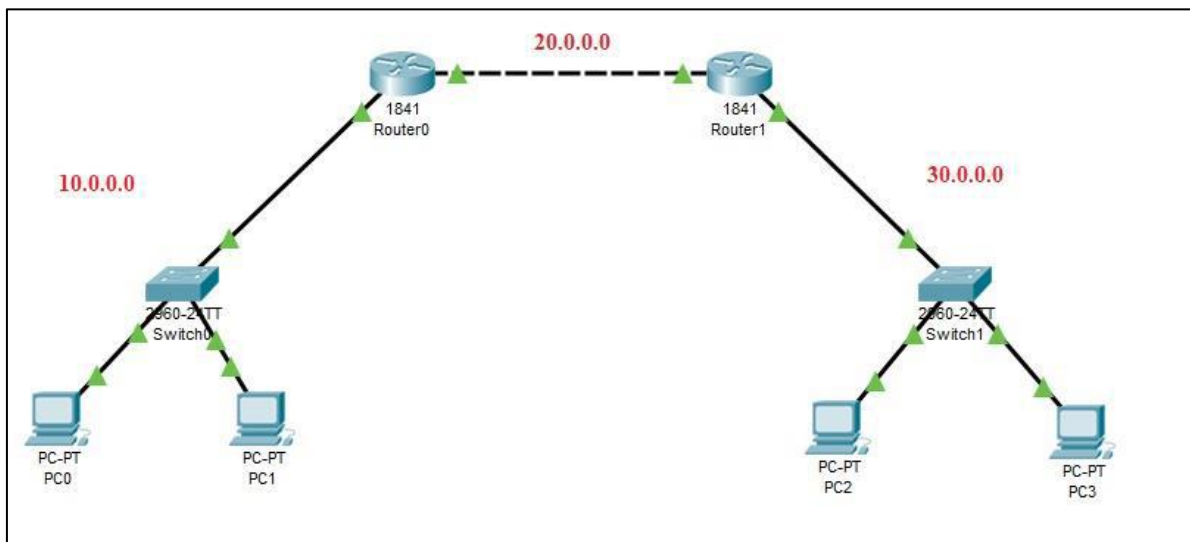

Objectives:

- To understand the purpose of Cisco Packet Tracer.
- To navigate, choose network and end devices and customize them.
- To interconnect devices and configure them using simple interface.
- To become familiar with building topologies in Packet Tracer.
- To simulate data interactions traveling through a network.

# 1. Task 1

## 1.1 Configuring Topology

- The network devices are organised in the required topology shown.
- IP Addresses have been assigned to each interface being used on the routers and end systems.
- The routing tables are then configured manually by adding the required routing information
- A PDU packet is then transferred from one end system on a network to another on a different network.

If the packet transfer is successful, a successful status is shown in the bottom right corner.

## 1.2 Configuring Network and Routing Tables

### 1.2.1 End Systems

Below is the finalised network topology:

## 2. Task 2

The task performed above is repeated with another topology and the routing tables are configured appropriately.
